EXHIBIT A

ENGINEERING STATEMENT

The engineering data contained herein have been prepared on behalf of TRINITY BROADCASTING NETWORK, INC., permittee of W15AF, Channel 15, Vero Beach, Florida, in support of its application for a minor change in the facilities specified in Construction Permit BMPTTL 860522IB. It is proposed herein to change antenna site, effective antenna height, antenna pattern, and effective radiated power.

The newly proposed site, shown in Exhibit B, is 1.98 miles southeast of the authorized site, and it is within the authorized 74 dbu contour. The site is that on which WGYL(FM), Channel 228A, Vero Beach, is presently located.

The site is within two miles of Standard Broadcast Station WAXE, 1370 kHz, Vero Beach, 0.06 miles distant. The site is also that specified by Television Translator W50AF (CP), as well as by applicants for TV translators on Channels 18, 60, and 69. The site is not within 200 feet of any existing or authorized FM or full-class TV facility other than WGYL. While it is not expected that the facility proposed herein will cause interference to any of the aforementioned facilities, if such should occur, the applicant assumes full responsibility to take whatever corrective steps are necessary.

Exhibit C is a sketch of the proposed antenna side-mounted on the existing WGYL supporting structure. Antenna radiation pattern data are

EXHIBIT A

included as Exhibit D.

Exhibit E details the rationale behind the classification of these changes as "minor" within the context of the Commission's Rules. In the first tabulation, Exhibit E-1, the authorized 74 dbu contour distance along each of the standard eight radials is calculated based on the effective radiated power, effective antenna height, and the FCC's F(50,50) curves for UHF propagation. In the second tabulation, Exhibit E-2, the allowable ERP at the new site is derived for each of the eight radials and compared with the ERP from the facility proposed herein. As shown in Exhibit E-2, the terrain-factored ERP of the facility proposed herein never exceeds that permitted under the parameters specified in BPTTL-860522IB. Thus the newly proposed 74 dbu contour is contained within that authorized, making these changes "minor" in nature.

Since no change in the overall height of an existing structure is being proposed, the FAA has not been notified of this application.

Now that the FCC is considering the biological effects of non-ionizing electromagnetic radiation on the surrounding environment in its environmental determinations, this subject has been studied with respect to the instant proposal. The following table lists all facilities, licensed, authorized, or proposed, on the WGYL tower. Also listed are the power and height values, as well as the maximum allowable radiation values:

EXHIBIT A

<u>Facility</u>	<u>Type of Service</u>	<u>Status</u>	<u>Power*</u>	<u>Effective Height AGL</u>	<u>Rel. Field†</u>	<u>Freq. (MHz)</u>	<u>Calc. Pwr. Density (mw/cm²)</u>	<u>Allowed Power Density (mw/cm²)</u>	<u>%</u>

								TOTAL	17.1

* FM power = ERP (H) + ERP (V)

TV power = Average visual power + aural ERP (assumed to be 20% of peak visual ERP)

† Worst-case

From the above table it may be seen that, even assuming that maximum radiation from all facilities, if licensed, is oriented toward the tower base, the total contribution of all facilities to the maximum allowable non-ionizing electromagnetic radiation environment would be less than 20 percent. Obviously, a grant of the facility proposed herein would not constitute a major environmental action with respect to non-ionizing electromagnetic radiation.

RE: Trinity Broadcasting Network, Inc. Minor Modification of
Television Translator K64AT, Victorville, Apple Valley,
Adelanto, Silver Lakes and Phelan, California

Dear Mr. Tricarico:

Filed herewith, in triplicate, on behalf of the Trinity Broadcasting Network, Inc. (TBN), is a minor change application concerning the referenced television translator. This application involves a channel change from Channel 64 to Channel 33, and is necessitated by the recently granted authorization of KVVU(TV), Channel 64, Barstow, California. This application is therefore being submitted in accordance with the new standards enunciated by the Commission on February 27, 1987 in its Report and Order in MM Docket No. 86-286, FCC 87-44.

This application also contains a request for waiver of rule 74.705(a). As is shown in greater detail in the allocation study included in the engineering portions of this application (Engineering Exhibit F-1), no predicted interference to any full or low power television facilities is calculated. However, with regard to KMEX-TV, Channel 34, Los Angeles, California that conclusion is based upon calculations using KMEX's actual Grade B contour, which is different from its predicted Grade B contour due to a significant beam-tilt in its signal. Accordingly, since TBN's proposal employs use of KMEX's depression angle correction in verifying that its proposed channel change for K64AT will not cause interference to KMEX, a waiver of rule 74.705(a) is respectfully requested.

In this regard it should also be noted that if TBN was here proposing the use of channel 33 as a full power facility, rather than a television translator, depression angle correction measurements would automatically be used in accordance with rule 73.684(c)(1). Moreover, TBN represents as part of its application that it will take whatever steps are necessary to

correct any interference problems which may occur, although none are predicted.

Finally, since the channel change requested in the attached application is defined as a "minor change" in accordance with the Report and Order in MM Docket No. 86-286, no fee is required.

If any questions should arise concerning this matter, kindly contact the undersigned directly.

Respectfully submitted,

TRINITY BROADCASTING NETWORK,
